

The new Energy Centre launched at MCET

MCET has entered into a partnership with the Centre for Sustainability in Energy and the Environment (CSEE) located at the University of Cape Breton in Nova Scotia, Canada. MCET is working with a number of industries in Tamil Nadu to develop new technologies and solutions for environmental problems. The Energy Centre will provide leadership in alternative energy sources such as bio-mass, solar energy and wind power. Both partners will collaborate in a series of research initiatives. Dr. Ross McCurdy, the Chief Operating Officer, during his visit to MCET, said “This is a pioneering project and both partners will work together to support industries. MCET and CSEE have a long-term vision and this partnership will provide a new vision”.

Dr. McCurdy visited the campus from March 19-22, 2012.
